The Environmental Horticulture Industry Produces Plants
Plant production accounted for $59 million.

Overall environmental horticulture industry plant sales are estimated to be $101 million, or 35% of overall industry income. Of these plant sales, $59 million were from plants produced partially or totally by the seller, and $42 million were from finished plants bought for resale—either wholesale or retail. Of the self- or own-produced plants, $32 million were from those propagated and grown totally by the seller, and $27 million were from those purchased as young plants (pre-finished) and grown further prior to selling.

Where are the Environmental Horticulture Markets?
Most business income results from sales and services provided within the state.

The majority of income from sales and services was from within the state, or $271 million. Income resulting from sales outside the state mainly comes from Massachusetts (2%) and New Hampshire (2%). Income resulting from sales outside the region mainly comes from other states beyond the Northeast (1%).

This Industry Provides Employment Opportunities
An additional 2,200 employees are needed in Environmental Horticulture

The Environmental Horticulture industry provided employment for at least 10,500 persons in 1998. Over the 5-year period from 1993 to 1998, jobs in this industry increased by 4,300 or 69%. This reflects increases in full-time jobs by 2,500 (or 89%), in part time jobs by 500 (or 89%), and in seasonal jobs by 1,300 (or 48%). In spite of these increases, if they could have found qualified employees, Environmental Horticulture firms in 1998 would have hired 700 more full time, 200 more part time, and 1,300 more seasonal employees. Payroll in 1998 was $152 million (53% of income). Over half the firms (57%) paid more toward employees (average 100% more) than in 1993.
